### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Werner H. Stermer at 954-925-1100 on 03/14/08.

Cancel claim 41.

### ***Reasons for Allowance***

Examiner acknowledges a submission of the amendment filled on 02/13/08. Claims 31 & 36-39 have been kept original, claims 29, 34 & 41 have been previously presented and claims 1-28, 30, 32-33 & 40 have been cancelled. It also included remarks/arguments.

Amendments and arguments have overcome rejection.

The following is an examiner's statement of reasons for allowance.

**Claim 29:** the closest references are:

- Fuel injection system: Rueger et al. US Patent 6498418 issued on December 24, 2002,
- Electrical circuit, particularly an electronic power circuit for motor vehicle injection systems, with a function for the detection and diagnosis of faults, and the related method: Giorgetta et al. US Patent 5173832 issued on December 22, 1992 and

- Method and apparatus for regulating voltages and voltage gradients for driving piezoelectric elements: Rueger et al. US Patent 6619268 issued on September 16, 2003.

These patents disclose:

- Rueger: a method (a person of the ordinary skill will understand a method that is intrinsically described by the functioning of the apparatus) of monitoring an actuator connected in an actuator circuit (Abstract), the method which comprises: measuring a first electrical current flowing through the actuator (Col. 3 lines 3-12 & Fig. 2 element 620, 320); measuring a second electrical current (Col. 7 lines 32-33 & Fig. 2 element 650) flowing in the actuator circuit (Fig. 2) before or after the actuator, comparing the first and second electrical currents for detection of a fault (Col. 3 lines 3-5); measuring a voltage in the actuator circuit (Col. 7 lines 35-37 & Fig. 2 element 640).
- Rueger et al.: teaches a method an apparatus for driving actuators wherein integration of the current is performed resulting in a charge quantity (Col. 29 lines 53-57 & Fig. 11 element 980).
- Giorgetta et al.: teaches an electronic power circuit for the detection and diagnosis of faults and the related method (Abstract).

The references do not disclose: a comparator unit connected to said first, second, and third measuring devices, said comparator unit being configured to effect a comparison between the first and second electrical currents, and to generate a diagnostic signal in dependence on the comparison and in dependence on the electrical voltage measured by said third measuring device. They do not disclose the use of a transformer in the actuator circuit.

As a result for claims 29, 31, 34 & 36-39 the allowability resides, at least in part, in the above-described limitations, in combination with the other elements of each of the claims, which has not been disclosed in or rendered obvious by the Prior Art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
